

In a world where launching a website is as easy as a click, stepping into physical retail still feels out of reach—too costly, too risky. Shopify Front bridges that gap. We empower small businesses to pop up in physical spaces—quickly, affordably, and without the long-term commitment. Through our platform, brands select a space, engage directly with communities, and test their products in real life. It's not just about selling—it's about validating ideas, gaining real-world feedback, and building local connections. Shopify already leads online; now we help them—and you—shape the future of physical retail. Let's make your next leap into the real world as seamless as your first click.

LANDING PAGE

Hero Section

Full-screen.

Minimal.

Bold typography.

Moving footage or slow ambient visuals of empty storefronts, loading websites, people interacting with products, city movement, hands touching objects.

Main headline:

The barrier to digital retail disappeared.

Physical retail never caught up.

Small subtext:

Shopify Front transforms retail into a live testing environment for small businesses
— making physical space as accessible as launching a website.

Primary CTA:

- Explore the System
- Watch the Experience
- Enter the Platform

This section should feel emotional, not explanatory.

SECTION 2 — THE SHIFT

Title:

Anyone can launch online.

Almost nobody can launch physically.

This is where you introduce the tension.

Split-screen visual:

Left side:

- Shopify dashboards
- website builders
- fast launches
- “Launch in a day”

Right side:

- empty storefronts
- lease contracts
- construction
- risk
- “Years of commitment”

Supporting text:

The internet removed friction from starting a business.

Tools like Shopify, AI website builders, and no-code platforms have made digital entrepreneurship accessible to almost anyone.

But physical retail still operates on outdated systems:

high commitment, high risk, and limited access.

For small businesses, the leap from online to physical remains nearly impossible.

This creates a growing divide between where businesses begin and where meaningful customer interaction actually happens.

SECTION 3 — INTRODUCING SHOPIFY FRONT

This should feel like the “reveal.”

Large clean render/mockup of the platform.

Title:

Shopify Front

Subtitle:

A modular retail infrastructure for testing products in the real world.

Then explain simply:

Through Shopify Front, businesses can:

- access temporary retail spaces
- launch short-term storefronts
- observe real customer behavior
- gather physical insights
- validate products before scaling

And the important line:

Retail becomes a tool for learning — not just selling.

That sentence is central to your thesis.

SECTION 4 — HOW IT WORKS

This should feel like a product walkthrough.

Horizontal scrolling or step-based storytelling.

Step 1 — Onboard

Brand enters product details, goals, target audience.

Step 2 — Select a Space

Choose location, storefront size, duration.

Step 3 — Launch

Temporary retail installation is deployed.

Step 4 — Observe

Track foot traffic, interaction zones, engagement patterns.

Step 5 — Iterate

Businesses refine products, layouts, branding, or strategy.

This is where your UI prototypes go.

NOT just static screens.

Frame them like a real ecosystem.

SECTION 5 — WHY PHYSICAL MATTERS

This is your emotional section.

Big visuals.

Minimal text.

Title:

Products are not understood through clicks.

Then fragments:

Not impressions.

Not analytics dashboards.

Not online reviews.

Real understanding happens:

- in hesitation
- in touch
- in movement
- in instinct
- in reaction

This section should almost feel cinematic.

SECTION 6 — COMMUNITY + LOCAL IMPACT

Very important.

This makes the project bigger than commerce.

Title:

A system designed for local economies.

Talk about:

- vacant storefront activation
- helping landlords fill temporary spaces
- supporting local entrepreneurs
- bringing experimentation back into cities
- reducing barriers to participation

Potential visual:

Map of Toronto with temporary retail nodes appearing.

This section reframes the project from “retail platform” to “urban infrastructure.”

That makes the thesis stronger.

SECTION 7 — USE CASES

This is where the project becomes believable.

Cards or scenarios:

Kickstarter Founder

Tests a prototype before manufacturing at scale.

Small Fashion Brand

Validates sizing and customer behavior in person.

Food Startup

Experiments with neighborhoods before committing to a lease.

Digital Creator

Transforms online audience into physical community.

This is HUGE because it shows flexibility.

SECTION 8 — THE DATA / INSIGHT LAYER

This should feel clean and analytical.

Not overwhelming tech language.

Show:

- foot traffic heatmaps
- dwell time
- interaction zones
- customer flow
- behavioral patterns

Important:

You are NOT selling surveillance.

You are selling understanding.

So your language matters heavily here.

Say:
“behavioral insight”
not
“tracking consumers.”

SECTION 9 — THE VISION

This should feel speculative and future-facing.

Title:

What if launching a storefront felt like launching a website?

Then:

Shopify transformed digital entrepreneurship.

Shopify Front extends that accessibility into physical space — creating a future where retail becomes flexible, testable, and community-driven.

This is not permanent retail.

It is adaptive retail infrastructure.

FINAL SECTION

Very minimal.

Black background.
Simple line.

Before businesses scale physically,
they should be able to learn physically.

Then:

- Full thesis report
- Prototype walkthrough

- Video presentation
- Contact

MOST IMPORTANT THING

Right now your project is strongest when framed as:

NOT:

“A pop-up retail platform.”

BUT:

“A new infrastructure layer between digital entrepreneurship and physical participation.”
